GENERAL INFORMATION

AQUEDUCT Granular Formulation is a nonionic soil surfactant impregnated onto an inert organic carrier. This results in a dry granular formulation that provides performance equal to AQUEDUCT Liquid Formulation with the convenience of a spreader application. AQUEDUCT was developed to provide turf managers with an effective tool to treat existing localized dry spots, wet spots, and other water related problems without concern of burning turf. Used as directed AQUEDUCT is biodegradable and non-toxic to plants and animals. AQUEDUCT can safely be applied in the spring, before the irrigation system is activated, as well as during the summer when environmental stress conditions may impact turf performance.

DIRECTIONS FOR USE
